WATER DISTRICT

Recent Water System Surveying on Oak Street

Earlier this week, S&F Land Services performed surveying on Oak Street. This survey work will identify underground utilities so that TVWD's engineering team can design a replacement water main for this area.

What's TVWD Planning?

TVWD will replace 1,900 feet of water main serving customers on SW Oak Street from 72nd to 80th Avenue. This water main replacement is being prioritized due to corrosion and prior leaks. The existing water main will be replaced with an 8-inch ductile iron water main.

This project is in the early design stages and there is no construction schedule at this time. TVWD will announce construction plans in advance of the project so yourself and neighbors know what to expect and can ask questions.

We apologize for not announcing this week's survey work in advance and will strive to better inform customers on Oak Street as this project progresses toward construction.
